

What is the best WIM system in the world?

This is a question that is asked often and not easy to answer. Experience from other users is hard to find and information from manufacturers is often 'biased'.

More than 20 years of experience in Weighing-In-Motion has taught us that there is not one single to answer this question. The key is to find the best match between your needs and what the different manufacturers and technologies have to offer. This is where an independent expert like Corner Stone International can help.

How we can help you

Corner Stone International is an international expert on Weigh-In-Motion. We are independent of sensor technology and manufacturer and have been working with many different WIM-users from all around the world. Our services consist of project management, consultancy and training on all aspects of WIM technology, installation, testing, operation and application.

**'Accuracy alone is not enough
to qualify the performance
of a WIM system'**

Our six steps to find the best WIM system for you

Our approach starts with you; your situation, your challenges, your application and from there we will determine step by step which WIM has the best fit. Our approach consists of describing:

- ⇒ The **purpose**, what is the underlying problem you want to solve?
- ⇒ The **application(s)**, who will be using the WIM and in what way?
- ⇒ The **operational conditions**, where will the WIM be installed?
- ⇒ The **specifications**, what output and performance are required?
- ⇒ The **test procedure**, how to make sure that the specifications are met.
- ⇒ The **calibration** and monitoring of the quality of the WIM data over time.
